

## HouseRater – Job Opening

(P) 651-200-3400 (F) 651-770-1183 careers@houserater.com 1345 Corporate Center Curve, Eagan, MN 55121

HouseRater is modern energy program management software for Utilities, Raters, and Providers. Our software stores over 1,200 data points for each house and tracks building science recommendations for rating companies. We are actively building the foundation for energy efficient houses by helping raters across the U.S. provide energy consulting information, utility rebates and building services.

### *Software Developer (Web—Angular, React, Node)*

---

This organization is hiring a Software Developer to join the small and diverse HouseRater team. You'll be building sophisticated cloud and mobile products with JavaScript code shared across many environments in an agile organization with sprints, story point estimation and velocity tracking. Because of our organizations size, your role includes a large variety of tasks like Angular or React UI development, Node backend development, CI/CD pipeline management. We'll also help you start leading features and UX design/development to help rating companies work smarter.

You'll be able to influence product decisions that affect homebuilders across the country. HouseRater allows large and small rating companies to provide a better service to their clients ranging from Fortune 500 customers to your local building company.

#### **PRIMARY RESPONSIBILITIES**

- Contribute to writing and upgrading HouseRater by following industry best practices in software engineering for web programs, with skills in Angular, React and Node.js
- Review and manage code, including unit tests and integration tests, collaboratively through GitHub Pull Requests and Bamboo CI/CD.
- Ship code from a development machine to multiple deployment environments while avoiding code quality issues, with minimal additional oversight.
- Love the whole process, from working with users to define needs, writing commit messages, all the way to the final deployment and feature toggle in production.

#### **IDEAL QUALIFICATIONS**

- Deep knowledge of a frontend UI framework, esp. Angular or React, and a backend system, esp. Node.js, and a passion for building on both sides.

- Experience in building SaaS programs, or ambitions to learn SaaS application design, and the ability to ship high-quality quality code quickly.
- History of projects you've led or been a primary contributor towards, from idea and UI/UX layout to deep internal implementation.

#### **APPLICATION REQUIREMENTS**

During your hiring process, we're required to check a few things, like running a normal background check, and verifying your eligibility to work full-time in the USA. If selected, you agree that it's okay for our company to verify these points.

#### **BENEFITS**

Building world-class software is challenging work and every `git commit` deserves a reward. In addition to competitive compensation, HouseRater benefits include:

- Flexible Office Hours w/ Remote Options
- Always-Stocked Coffee & Beverage Fridge
- Summer Company BBQs and Winter Potlucks
- Health, Dental, Disability and Life Insurance
- 401(k) Plan with Automatic Employer Contributions
- 9 Paid Holidays and 15-day PTO (starting)
- Office Fitness Workouts & Challenges
- Health Club Membership Reimbursement

If you feel this opportunity is right for you, please send your résumé to [careers@houserater.com](mailto:careers@houserater.com).
